# Application software

**We develop computer software of any kind, tailored to your needs!**

Our company has more than 15 years of project experience in the field of individual software development on the international market. Our experienced staff has already delivered numerous top quality projects and can promptly analyze your request and offer you the best possible software solution. We work on the basis of agile software development methods. We react promptly to change requests, offer our customers full transparency, consultation and always a possibility to check the status of the project and discuss new requests.

**Just contact us and we will analyze your requirements and provide you with a non-binding offer!**

# App Development

We create an app concept together with you and increase the chances of success. Benefit from our experience from previous projects. Our experts for the Apple iOS and Google Android platforms program your app and implement your concept. We speak Objective-C and Java fluently and ensure that your concept is solidly implemented. Even after project completion, we are always at your disposal.

**We are looking forward to your request!**

# Cloud Software

**Cloud software offers some significant advantages over locally installed programs.**

The application has virtually unlimited computing capacity and storage available, regardless of the end device, and you only pay the data center for the resources your company actually uses.

If we develop your cloud applications according to the "serverless principle", you also do not need system administrators. There is simply no need for dedicated servers in data centers, which would have to be administered.

Instead, the application fetches the operating system, databases, storage and Internet connection directly from the cloud - and always the latest version and the resources that are needed right now.

**Contact us, we will be happy to analyze your requirements and provide you with a non-binding offer!**
